

Lighting for Composites:

This course is aimed at beginner to intermediate photographers who want to learn how to create realistic composite images.

When creating a composite image, the lighting is one of the most crucial aspects. This course will teach you how to read the lighting in the images you want to composite and how to replicate that lighting onto the subject you want to put into your photograph.

What to bring:

Photographers should bring with them their camera and whatever lenses they feel comfortable shooting with.

Please bring a packed lunch as there are no local facilities – although there is a pub which is a 10 minute drive away.
