

53N.2W David Travis

My location was on a farm and there's no roadside parking. So I decided to ask the farmer if he would allow me in his field. He already seemed to know about the intersection on his land – some Canadians had visited a few years ago apparently – so he was able to point me to the correct spot. I also took a photo on my phone so I could get precise GPS co-ordinates. The actual co-ordinates from my phone are 53° 0' 0.6084" N 1° 59' 59.8038" W.

The location itself was a field with not a great deal of interest, but I spotted this cluster of three trees about 50m away from where I was standing looking North East. I used a long lens (equivalent to 186mm on a full frame camera) and composed the image as a square as I knew I would be cropping to a square in post production. I took two versions: a straight version and an ICM version. This ICM version was a 2.5s exposure achieved by using a 6-stop ND filter and shooting at f/22.
